

The Caplin

BY LIVING STONE CONSTRUCTION

The Caplin is a universally designed home that maximizes your mountain views, boasts a real old-world feel, and is incredibly energy efficient. This floor plan works well, on a flat or sloping lot, for families of all sizes and ages. With a large master suite, open entertaining spaces, and optional study all on the main level, it is ideal for the couple that is looking to slow down their professional life and begin enjoying mountain living. Since it has overflow bedrooms, bathrooms, and recreational space on the lower level, family and friends can stay as long (or as little) as you like! This 4 bedroom can easily be converted into more bedrooms (or bonus spaces) by finishing out more of the lower level or utilizing some of the oversized attic. Perhaps the best feature of this home is its orientation to the mountain views from the great room, master bedroom, and screened porch. This plan allows for 1,992 heated square feet on the main level and an additional 995 hsf on the lower level. Although shown over a basement, the foundation can also be placed over a slab, crawl space, or fully finished lower level depending on your needs.
